Richmond Area Employment — June 2014 Local Employment Rises Faster than National Rate Over the Year

Total nonfarm employment for the Richmond Metropolitan Statistical Area stood at 650,100 in June 2014, up 13,200 or 2.1 percent over the year, the U.S. Bureau of Labor Statistics reported today. During the same period, the national job count rose 1.9 percent. Sheila Watkins, the Bureau's regional commissioner, noted that the June 2014 employment increase was the 49th consecutive over-the-year rise in the Richmond metropolitan area and the 46th nationwide. (See chart 1 and table 1. The Technical Note at the end of this release contains the metropolitan area definition. All data in this release are not seasonally adjusted; accordingly, over-the-year analysis is used throughout.)

Chart 1. Total nonfarm employment, over-the-year percent change in the United States and Richmond metropolitan area, June 2005-June 2014

In the greater Richmond metropolitan area, the education and health services supersector gained 3,800 jobs from June 2013 to June 2014, the largest 12-month increase in over five years. The recent advance represented a 4.1-percent employment increase over the year, more than twice the national growth rate of 1.9 percent for this industry.

Three other industries in the Richmond area recorded job gains of 1,000 or more over the year: professional and business services (3,100); trade, transportation, and utilities (2,200); and financial activities (1,700). The recent increase in professional and business services was the largest 12-month gain since December 2012. The trade, transportation, and utilities supersector and the financial activities supersector have recorded uninterrupted 12-month advances in this area since June and October 2010, respectively. The local growth rates for professional and business services and trade, transportation, and utilities were lower than the national rates for these industries. The financial activities supersector grew at a 3.6-percent pace over the year in Richmond, over four times faster than the national rate. (See chart 2.)

The Current Employment Statistics (CES) Survey is a monthly survey of business establishments which provides estimates of employment, hours, and earnings data by industry for the nation as a whole, all States, and most major metropolitan areas since 1939. The CES survey is a Federal-State cooperative program in which State employment security agencies prepare the data using concepts, definitions, and technical procedures prescribed by the Bureau of Labor Statistics.
